Letter of Recommendation for Dr. Xiuquan Wang

Members of the Faculty Evaluation, Promotion, and Tenure Committee,

It is my pleasure to write this letter of support for Dr. Xiuquan Wang as a candidate for promotion to the rank of Associate Professor and Tenure.

Dr. Xiuquan Wang in a short time has become a valued member and leader in the Mathematics and Computer Science department. Dr. Wang is committed to continuing his research and pursuing other scholarly activities and actively pursues funding for research. Dr. Wang recently published "Comprehensive network analysis reveals alternative splicing-related lncRNAs in hepatocellular carcinoma" in Frontiers in Genetics Bioinformatics and Computational Biology. He also presented the paper "Insect Drift Movement Modeling and Parameter Estimations via Boundary Characteristics" at the 2016 Joint Mathematics Meeting of the AMS Session on Mathematical Biology and Related Fields in Seattle, WA.

Dr. Wang is the principal investigator of an NIH/NIGMS grant with the University of Mississippi Medical Center. His expertise in Topology, Statistics and Bioinformatics have prepared him to be successful in his research project "Uncovering and Understanding Population Differences with Topological Methods". This research also gives him the opportunity to collaborate with an interdisciplinary team on projects to build machine learning tools to better predict and understand incident disease (CKD, stroke, etc)

Dr. Wang has impressed me with the energy he brings to the classroom and the department. He is very effective in his teaching style and presentation. During my classroom observations, it is clear that he spends a significant amount of time on preparation. Dr. Wang is actively involved

MEMBER

with activities in the department and division. Dr. Wang has taken the initiative to take groups of students to conferences. This was well received by the students.

Dr. Wang is also active in the mathematical and campus community. He is generous with his time assisting students with their research. He also judges at local events and referees at regional and national conferences. His professional activities also include research seminars, lectures and textbook chapter reviews.

Dr. Wang's performance in and outside of the classroom is outstanding. As the senior mathematics professor he has been instrumental in providing direction and stability for our majors and the curriculum. I wholeheartedly recommend Dr. Xiuquan Wang and support his candidacy for promotion to the rank of Associate Professor and Tenure. Please contact me if you have further questions.

Sincerely,

Sharron T. Streeter, Chair
